

Navy Lists Last Three Crash Dead

BRUNSWICK, Ga. (UPI) — The Navy identified Sunday three students aboard a T39 training jet which crashed last Thursday while on a low-level training flight over the Okefenokee Swamp, killing all five crewmen.

A spokesman at Glynco Naval Air Station identified the three as Marine 1st Lt. Thomas C. Satterlee, husband of Linda Sue Satterlee of 6712 Ward Parkway in Melbourne, Fla.; Marine 2nd Lt. Warren R. Brundage Jr., son of Mr. and Mrs. Warren R. Brundage Sr. of 2422 Cypress, Manasquan, N.J.; and Marine 2nd Lt. Walter W. Lubbe Jr., husband of Patricia Camille Lubbe of 97 Highgate Terrace in Bergenfield, N.J.

Two instructors on the flight were identified earlier as Navy Lt. James W. Hughes of St. Simons Island, pilot of the aircraft; and Marine Capt. Ronald B. Tuttle of Brunswick, navigator.

So dense was the area in which the plane crashed that both the plane and the bodies of its crewmen literally disintegrated. An Air Force pathologist flew to Glynco Saturday to help in the identification.

Dense plant growth, deep water and mud made the crash site inaccessible by ground and helicopters were used to recover the remains of the crewmen.

Navy Lists Other 3 in Jet Crash

BRUNSWICK, Ga. (AP) — The Navy Sunday identified the remaining three victims of a T39 jet trainer which crashed Thursday in the Okefenokee Swamp in southeast Georgia, killing five.

The victims, who were Marine student pilots, were identified as:

1st Lt. Thomas C. Satterlee, husband of Linda Sue Satterlee, 6712 Ward Parkway, Melbourne, Florida.

2nd Lt. Warren R. Brundage Jr., son of Mr. and Mrs. Warren R. Brundage Sr., 2422 Cypress Manasquan, N.J.

2nd Lt. Walter W. Lubbe Jr., husband of Patricia Camille Lubbe, 97 Highgate Terrace, Bergenfield, N.J.

Earlier, authorities at Glynco Naval Air Station at Brunswick identified the pilot as Navy Lt. James W. Hughes of St. Simons Island, Ga., and the navigator as Marine Capt. Ronald B. Tuttle of Brunswick.

The bodies were recovered from the tangled wreckage of the jet plane, which crashed in an area of dense plant growth, water and mud in the snake and alligator-infested swamp.

A spokesman said authorities delayed announcements about the student pilots until positive identification could be established by a pathology expert.
